

# Connected Device

---

## Final Project

### Name and Course

- Name: Shivani Bhalchandra
- Course: Connected Devices
- Semester and Year: Spring 2019

### Description

Description: A solution towards home safety and security using two motion detection sensors of SenseHat. When a magnetic field of the safe lock handle is changed in the wrong way it should trigger an alarm. Also motion detection capability will trigger a SOS alarm via SMS/EMAIL in case of emergency. Developed four application SOSStart , SOSAlert , AlarmStart, AlarmAlert that securely communicate with a remote cloud Ubidots IoT service and publishes updates to a Ubidots device variable at regular intervals using both MQTT ,HTTP and the Ubidots API. The actuator events on Ubidots trigger an alert which the Alert applications subscribe to and generate appropriate LED messages as well as publish email. It is implemented in python.

### Code Repository

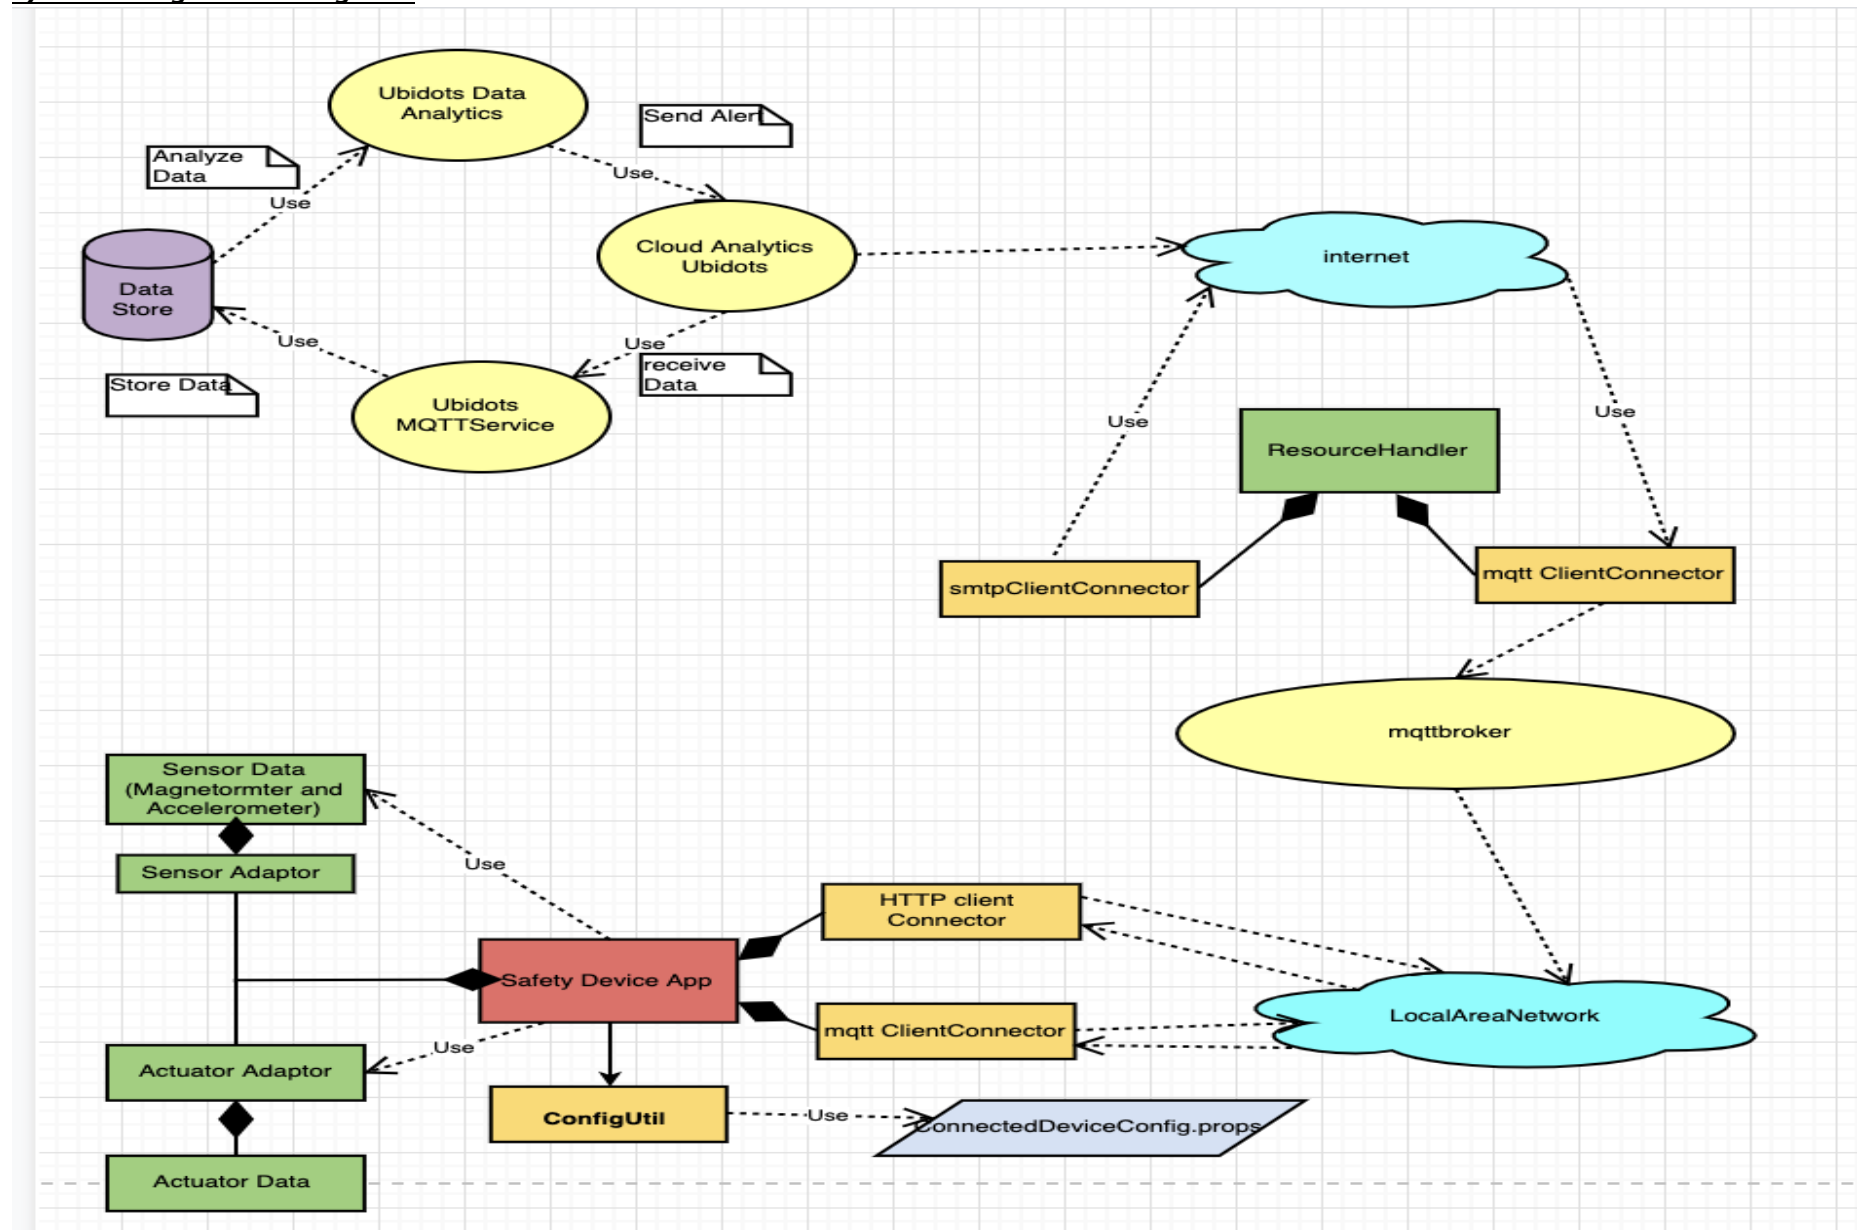

URL

- <https://bitbucket.org/shivanibhalchandra/iot-device/src/master/apps/labs/module08/>
- Videos are inside the same folder

Listing of all modules (added or changed):

- module08(python)
- SOSStart.py
- AlarmStart.py
- SOSAlert.py
- AlarmAlert.py
- SOSActuator.py
- AlarmActuator.py
- SOSSensor.py
- AlarmSensor.py
- HTTPCompassPublisher.py
- MqttClientConnectorNew.py
- SmtplibClientConnector.py
- ConfigUtil.py
- ConfigConst.py
- SOSLed.py

### System Design Block Diagram:

Application Output for in Burglar Alarm python:
